

Secure “WhatsApp” for Healthcare?

Much more than Secure Messaging

Teamware is much more than a secure messaging app for hospitals and healthcare organizations.

Teamware solves the WhatsApp problem, simplifies collaboration and improves urgent communication.

Our secure messaging app also helps to automate workflows and enables easy coordination of emergencies.

Teamware is fully GDPR-compliant and a **completely encrypted** solution. As a German provider we ensure the highest levels of data protection, security and usability, that are appreciated by leading healthcare organizations.

Key Benefits

- Improved team communication and collaboration.
- Accelerated coordination in urgent situations.
- Integrations to eHR and medical systems.
- Strong data protection and security.
- Professional administration and compliance.
- Improved patient care and outcome.

Primary Use Cases

- Real-time messaging to quickly collaborate and make decisions.
- Patient-specific group chats and permanent ward channels.
- Easy information exchange of patient status and medical data.
- Sharing of digital content (e.g. photos) of patient cases.
- Direct collaboration of mobile and stationary workers.
- Alerting in case of an emergency situation.
- Accelerating work flows with integrations to eHR.

Typical Customer Needs

- Seeking a WhatsApp alternative for healthcare.
- Improving the collaboration and productivity of teams.
- Empowering an increasingly “mobile” workforce.
- Improving emergency and crisis communication.
- Protecting patient and medical data.
- Ensuring data sovereignty, GDPR and compliance.

Availability

Native apps for iPhone, iPad, Android, Windows, Linux and Mac, as well as a browser client. Deployment as German cloud, private cloud or on-premise solution.
